DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Butz (GB 2 037 475 A).

As per claim 1, Butz (GB 2 037 475 A) discloses a disc (Figure 2) comprising a substrate layer (e.g., 2) that comprises a support plate (bottom portion of (2) and/or (10)) and a registration layer (information recording area of disc (9)) connected to the support plate (bottom portion of (2) and/or (10)), characterized in that a protective plate (1) is located at the side of the registration layer remote from the support plate (bottom portion of (2) and/or (10)), which protective plate (1) can be detachably fastened to the substrate layer (bottom portion of (2) and/or (10)).

As per claim 2 characterized in that the support plate (bottom portion of (2) and/or (10)) has the shape of a disc and is provided with at least one raised edge ((e.g., vertical extending portions of (2) and/or (10)) extending upwards from a circumferential edge, by means of which the protective plate (1) can be detachably fastened.

As per claim 3, characterized in that the protective plate (1) can be magnetically fastened to the substrate layer (2) - via magnets (25).

As per claim 4, characterized in that the protective plate (1) can be fastened to the substrate layer (2) by means of interlocking or force connections (e.g., magnetic force connection).

As per claim 5, characterized in that the substrate layer (2) *can be* inserted into a protective element which comprises at least the protective plate (1) - (e.g., is adapted to be inserted into any protective element).

As per claim 6, characterized in that at least an outer circumferential edge of the substrate layer (2) or of the protective plate (1) is provided with a groove - see Figure 3, the interface between (1) and (2).

As per claim 7, characterized in that the registration layer (recording layer) is provided with a covering layer (e.g., 11) at a side facing away from the support plate (bottom portion of (2) and/or (10)).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
